When user clicks 'STUDENT' label on the left panel it loads student details panel. Here user keep the basic details of a student. If a student wants to complete both Bsc and Msc degree he or she has the same student id for both degrees. If we want to save a student first have to fill all the fields. System checks validity of the email address, Birthday, Telephone number. After user clicks on the save button if successfully saved, then system shows student details in a table .Otherwise it shows an error message. If we want to delete or update a student ,first user should select the row from the table. Then system loads data to the fields automatically. After user can delete or update an existing student. If it is not successfully deleted or updated system shows an error message.

When user clicks 'REGISTRATION' label on the left panel it loads student registration panel. This registers a student according to the degree. For a new student first user should select the faculty and degree ,after type the student ID then System automatically generates a registration ID using student ID ,degree name and faculty name. Undergraduate panel and Postgraduate Panel will load according to the selected course type(Degree). The table will load all registered students which are relevant to the selected faculty and degree. If user wants to delete or update a registered student ,first select a row from the table then system loads data to the fields automatically. Whenever the user types student id system searches whether that student is already registered.

When user clicks 'LECTURER' label on the left panel it loads lecturer details panel. When user selects a faculty, system shows lecturers relevant to the selected faculty in a table (table in below). If user wants to add a new lecturer user should fill all fields. system checks validity of the email address and the telephone number. After user clicks on the save button system adds the lecturer in to the table. If it does not saved successfully system shows an error message to the user. And also system searches lecturers when user types lecturer id. If user wants to update or delete lecturer, first user should click on a row in the table. Then system automatically loads data to fields. Subjects can assign to a lecturer, for that first select a row from the lecturer table, then click on the 'add subject' button. After that system will load the subject panel.

Already assigned subjects will load to the subject table in lecturer panel by select a row from the lecturer table.
